

The proof is in our replacement Vemag parts ... and in your pocket

As companies around the world continue to react to these tough economic times by reducing operating cost, Henry & Sons Incorporated steps to the forefront. Vemag users around the world turn to H&S to save money when purchasing replacement parts and receiving the best quality money can buy. Saving companies' money and giving our customers what they need is what we do.

Henry & Sons Inc. was founded in 1980 by David Henry, and has been going strong for nearly 30 years, producing replacement Vemag parts and equipment. Our philosophy is simple, we make parts stronger where they need strength and remove any weakness that may be present based on OEM design. We do this through our extensive design department by implementing better design, engineering and use of higher-quality materials. We institute the best, most state-of-the-art machining and design concepts available to our industry. Our company also is very proactive when it comes to customer feedback: "we want to know if there are areas that need attention." If there is a better way to manufacture a component, we put it into play.

When our customers use our replacement Vemag parts, two things are achieved. First, they save hundreds and even thousands of dollars, compared to buying OEM parts. Second, they are impressed by how well our parts

Processor testimonial

"When we were expanding our ground beef operation from a small portion of our overall business to a large standalone operation, we were introduced to Henry and Sons as a reliable, knowledgeable, work-with-you company. Over the years they have proven themselves to be this and more. Our Henry & Sons AC-30 stuffer has been a continual worry-free performer in our production line. I have come to respect and utilize the working knowledge and recommendations of Mark Henry and his staff without hesitation. Over the years Henry and Sons has proven to be a valuable supplier of reliable equipment, [and] reasonably priced, well-stocked parts, helping us to keep in check down time and operating cost. I will ... use Mark in our future plans."

perform, fit, finish and in many cases last longer than comparable OEM parts. We offer a 100 percent satisfaction guarantee for all of the parts we produce.

We make better parts because we can!

Henry & Sons Inc. also manufactures a complete line of AC continuous vacuum stuffers. We cater to processors that use and abuse equipment two shifts a day, six days a week. Our equipment is designed with our customers' needs and requirements in mind and most important of all, efficiency. Our first machines were released in 1998 and are still going strong. All of our customers benefit from our design concepts by completing these difficult applications. Our ultimate goal is to reduce downtime and operating cost, and if we accomplish both of these tasks, we both win big.

We at Henry & Sons Inc. have another Long Time Philosophy: "Let's Put Americans to Work!" And that's exactly what we have done for nearly 30 years. All of the parts we manufacture are done so in the United States on equipment also built in the U.S. We pride ourselves on what our company has achieved in the years we have been in business, and we also have a well-respected reputation.

Our customers all have the same reply after using our products: "We wish we had found your company sooner."
